John Moody, Brandon, FL.

.....
The EASY RISER kit is now available.

Now that the FAA has clarified the definition of the ultralight aircraft, I believe there is a new opportunity for this type to develop and flourish. The EASY RISER is designed to be a foot-launched ultralight aircraft. It is so well balanced and coordinated that a correctly designed, lightweight engine addition makes it possible to fly from the flatlands. If you are new to this sport it is well to consider if foot - launchable, bird-like flight is for you.

Those of you who are experienced Riser pilots will appreciate the opportunity to obtain a brand· new, factory fresh Riser kit at a bargain price.

Enclosed is a copy of, "THE 100 MOST INFLUENTIAL AIRCRAFT OF THE LAST CENTURY'". The historic significance of this inclusion in the world's greatest aircraft is overwhelming to say the least. But it is a great opportunity for an historic aircraft at a bargain price.

A static display of the EASY RISER will enhance the atmosphere of any indoor display, museum, school, store, or what-have-you.

An aviation related club or group of young aviation enthusiasts will learn a lot by building this historic aircraft with their own hands.

The foot launched, ultralight aircraft is an aircraft of the future for many reasons. Because the new Light-Sport aircraft are now any aircraft weighing more than 254 pounds any aircraft weighing less (ultralights) is totally free to develop. This is an area of great interest to me. The EASY RISER stands as the known starting point for exciting new aircraft of the future. If this type of aircraft is of interest to you, let us give you a little lift in life!

Sincerely,
Larry S Mauro
